

Zero Loop Standard Work

Short 5-Minute IT Town Hall Speech

Length About 551 words	Style Simple and conversational	Slides 5 slides
----------------------------------	---	---------------------------

We are not adding more work. We are making standard work easier to remember and easier to reuse.

Opening

Good morning, everyone.

My name is Jing Yang, from the ELM Tech team.

Today, I would like to share a small project called Zero Loop Standard Work.

The project has two goals. The first is to help us remember routine IT checks. The second is to help us reuse solutions from issues we have handled before.

Slide 2 - A Preventable Business Impact

Let me start with a real example.

One day, I joined a temporary meeting and then handled an urgent issue. During the same shift, I also needed to check the communication status between PMX and SAP.

Because I was focused on the urgent work, the routine check was delayed. An On Hold message was not handled quickly enough, and this affected the business.

The important point is that this situation was avoidable.

The task was not difficult. The problem was that it depended too much on personal memory. A clear reminder could have helped us find the exception earlier.

Slide 3 - Standard Work 1: Daily Checklist Automation

The first solution is Daily Checklist Automation.

We keep a standard task list for daily, weekly, and monthly activities. When a task is due and is still open, the system sends a reminder.

The reminder also includes the check method, the related KB, the work instruction, and a direct link to the checklist.

For example, the reminder may say, "PMX-SAP communication check is due." From the same reminder, we can open the checklist, review the related KB, and follow the standard guidance.

We still perform the check and make the decision. The system only helps us remember the task and find the right information.

This also gives new team members a clear place to learn the standard work.

Slide 4 - Standard Work 2: IT Issue Solution Finder

The second solution is the IT Issue Solution Finder Agent.

Our previous solutions may be stored in ServiceNow tickets, KB articles, or issue notes. Finding the right record can take time.

With this Agent, we can provide an error screenshot or enter a few keywords. The Agent searches historical incidents and knowledge content. It then provides possible causes, handling steps, and related ServiceNow ticket numbers.

The Agent does not replace our judgment. We still need to review the result and decide the correct action.

Its value is to give us a faster and more consistent starting point, while helping the team reuse previous experience.

Slide 5 - Summary and Next Steps

To summarize, the two solutions support different parts of our work.

Daily Checklist Automation helps us complete the right task at the right time. The IT Issue Solution Finder helps us find previous solutions more quickly.

Together, they can help new team members learn standard tasks and common troubleshooting methods.

The next step is to continue adding and validating KB articles and historical issue information. Better knowledge will help the Agent provide more accurate guidance.

The same approach can also be reused by other departments with recurring checks or similar operational issues.

Closing

The main idea is simple:

We are not adding more work. We are making standard work easier to remember and easier to reuse.

This can help us prevent avoidable issues, respond faster, and share team knowledge more effectively.

Thank you.

Keywords for Practice

Slide	Keywords
1	Two goals - reminders and knowledge reuse
2	Urgent work - missed check - avoidable impact
3	Task list - reminder - checklist - KB - decision
4	Screenshot - historical incidents - solution - judgment
5	Onboarding - better KB - reuse across teams
